A patented French mechanism that's unique in the world !

1. DesignScreenHD projections screens are equipped with a HD quality screen surface, that has a reflective top coating, which offers an increased amount of brightness with a large viewing angle, making quality projections possible. In the open position, our screens are fully tensioned on fixed frames and give the experience of a dedicated theater room in your living room.

2. Thanks to a French patented triptych mechanism, DesignScreenHD screens are the only screens in the world that can be folded in 3 parts. It's as simple as closing a window : close the left section, then the right, that's it !

3. DesignScreenHD projection screens fold to be entirely concealed behind an authentic picture frame incorporated into the façade... your cinema screen blends in seamlessly with your living room décor. No more casing or electric cables on the ceiling !

4. In the closed position, DesignScreenHD projection screens are totally personalised picture frames. Delivered with an aluminium or wood frame and sheet of plexiglass, any poster or art reproduction of your own choosing can easily be mounted inside. A selection of finishes and colours are available.

The screens DesignScreenHD are distributed by: DSHD S.A.S - SIRET 483 559 456 00015  
DSHD - BP 28 - 46 route de reugny - 37380 MONNAIE France
